

ALANIS is a medium late, long tuber potato variety which has due to the voluminous shape a very good suitability for processing French Fries. Due to the excellent tolerance against Phythophthora infestans Alanis is suitable for the organic cultivation.

Some interesting facts about ALANIS:

- Moderate susceptibility for damages and bruises
- Excellent suited for long term storage due to a low content of reducing sugars risk and a strong dormancy
- High yield with low nitrogen input
- Good tolerance to periods of drought and heat

• Susceptible to herbicides with Metribuzin

• Excellent tolerance against Phythophthora infestans

• Highly resistant to Y-virus

• Resistance against nematodes Ro1, 4 (9) and wart disease 1 (slightly susceptible); 6+18 (6)

MATURITY: medium-late

TUBER SHAPE: voluminous, oval-longoval, rather shallow eyes, light-yellow flesh – and skin color

PROCESSING: excellent suitability for French Fries

YIELD:
